TECHOWN

CERTIFICATE

International Conference on Modern Global Research in Engineering and Technology

Perambalur 10th March 2018

This is to certify thatA. FRANCIS ADAIKALA RAJ..... of

SARANATHAN COLLEGE OF ENGINEERING, TRICHY..... has done

his/her excellence is presenting research paper titled

GSM BASED AUTOMATIC ENERGY METER READING SYSTEM.

..... at Perambalur 10th March 2018

SECRETARY

PROGRAM CHAIR

ICCTEE' 2018

CERTIFICATE OF PARTICIPATION

This is to certify that

Dr. / Mr. / Ms. R. GOKULAN

of SARANATHAN COLLEGE OF ENGINEERING

has participated in the Two Days INTERNATIONAL
CONFERENCE ON "CONTEMPORARY TOPICS IN
ELECTRICAL AND ELECTRONICS ENGINEERING"
from 27-02-2018 to 28-02-2018 Organized by
Department of Electrical and Electronics Engineering.

Submitted to the Principal

Sub: Report on intra-department Coding Contest – 6.2.2018-Even semester-2017-2018.

- Department of Information Technology has organized intra department coding contest. The II & III year students were informed about the coding contest during the last week of January. Contestants were asked to write computer programs in any(c and c++) languages capable of solving each problem. Selection is based upon the number of problems solved.
- The circular was put up in the notice board. They were asked to register their names to the staff coordinator.
- Contest was organized in two rounds. 74 students– 37 from III year & 37 from II year have participated in the first round. 20 students -11 from III year & 9 from II year were short listed for the final round.
- The prize winners are
 - I Prize – Vijay Aiswarya V of III year IT
 - II Prize – Hariharan. S of II year IT
 - III Prize –Jayashree. K of III year IT

Abstract

The main objective of this review paper is to ensure the quality lies within the desired tolerance level that can be accepted by the manufacturer needs and customer satisfactions. The selection of material plays crucial role in turning process. The input cutting parameters such as spindle speed, feed rate and depth of cut are normally considered for the experimental investigation and the output responses like material removal rate, surface roughness and tool wear are reviewed by using the Computer Numerical Control turning centre. Normally experiments are to be conducted based on the recommendation by the Traditional and Non-Traditional approach. The quality of the finished product is purely based on the selection of material and cutting parameters. This review paper accumulates and discusses the recent advances in CNC turning process and their impact on the quality of the turned specimen.

Key words

Turning process, Input process parameters, Output responses, Optimization techniques.

Introduction

The selection of manufacturing method depends on the quality and production cost for individual parts. Now a day, the objective of the manufacturing industries is to achieve the economical machining conditions. In the turning process, heat is generated by the conversion of mechanical energy into thermal energy at the interface of the test specimen and cutting tool during the contact under pressure. The input process parameters normally considered for the research works are spindle speed, feed rate, depth of cut, geometry and chemical composition of the test specimen and process setting. Recently many researchers have dealt with the optimization of process parameters for various manufacturing process. The critical review is essential on the significant of turning process for different combinations of materials having different cross section are discussed.

Vaibhav Sharma and Ravi Butola (2017) investigated the optimization of machining parameters in CNC turning of hybrid metal matrix composites using different techniques. The main objective of this investigation is to determine the optimum machining parameters (Cutting speed, feed rate and depth of cut) using L27 orthogonal array based on Taguchi's Technique. The output responses considered are Surface Roughness and Metal Removal Rate. Thus the authors concluded that the metal removal rate increases with increase in feed and surface roughness decreases with increase in cutting speed. Raykar, S. and Dabade, U. (2017) demonstrated the optimization of high pressure coolant assisted turning of Inconel 718 using TOPSIS. The main objective of this investigation is to find out the optimized process parameters (Pressure, cutting speed, feed rate and depth of cut) for machining heat resistant super alloys. The authors concluded that the metal removal rate increases with increase in feed and depth of cut and the surface roughness decreases with increases in cutting speed. Pay Jun Liew et al. (2017) investigated the optimization of cutting condition in the turning of AISI D2 steel by using the Carbon Nano Fibre (CNF) nano fluid. The main objective of this investigation is to optimize the process parameters (Type of coolant used, cutting speed, feed rate and depth of cut) using Taguchi approach based on the Response Surface Methodology on turning D2 steel using CNF nano fluid. Thus the authors concluded that the optimal tool wear and surface roughness were found to be at a cutting speed of 144.58 m/min and feed rate of 0.14 mm/rev. Jitendra Kumar Verma (2017) studied the optimization of cutting parameters for surface roughness and Metal Removal Rate (MRR) in CNC Turning of 16MnCr5. The main objective of this investigation is to determine the cutting parameters (Cutting speed, feed rate and depth of cut) on surface roughness and MRR using Taguchi L₉ orthogonal array technique. The authors concluded that the maximum MRR and minimum surface roughness is obtained at speed 800 rpm. Mohammad, H.M. and Ibrahim, R.H. (2017) investigated the optimization of sustainable cutting conditions in turning of carbon steel by using the
